

ML Problem to Model Matching Task

Instructions: Read each machine learning problem and write the most suitable model to solve it in the answer column. You may choose from: Linear Regression, Logistic Regression, KNN, Naive Bayes, SVM, Decision Tree.

No.	Problem Statement	Your Answer (Model Name)
1	Predict the price of a house based on its size, number of bedrooms, and location.	
2	Classify whether an email is spam or not based on words used.	
3	Identify whether a tumor is malignant or benign using medical features.	
4	Recommend movies to a user based on their viewing history and similarity to others.	
5	Predict whether a bank customer will default on a loan, based on their age, salary, and credit score.	
6	Identify handwritten digits (0–9) from image pixel values.	
7	Predict tomorrow's temperature based on historical weather patterns.	
8	Classify whether a customer will buy a product based on how closely their profile matches past buyers.	
9	Classify a document's topic based on frequency of certain keywords.	
10	Predict whether a person will be approved for a visa based on features like age, education, and work experience.
